Conference Announcement

The ART and SCIENCE of Medical Writing!

Basic & Advanced Workshop on 15 & 16 November 2013 at AMA, Ahmedabad

Medical writing is all about the *Art* of writing Science, or shall we say, presenting *Science* in best writing! Alternatively, also referred to as *scientific writing* or *medical communications*, Medical writing involves creating scientific documentation ranging from research-related documents to research reports, drug submission dossiers to clinical expert statements, research abstracts to journal manuscripts, patient-aids to promotional literature, and much more...perhaps any type of document intended for scientific or healthcare purpose!

In today's time, where the advances in biomedical research continuously upscale the scientific documentation requirement for regulators, and where internet widens the scope and accessibility of published information, medical writing is turning a lucrative vocation. As a medical writing professional, all you need is the ability to understand medical concepts and terminology, to know relevant guidelines and requirements of specific documents, and good writing skills.

So, if you want to break into medical writing but don't know where to start;

OR if you are someone who love both medicine and writing but have never heard of medical writing as a career path before,

OR if you already are into medical writing...

... here's something important for you!

The ISPE Ahmedabad chapter brings to you an interactive Basic followed by an Advanced Medical writing workshop on the 15th and 16th of November 2013 at Ahmedabad.
